CEO Statement

At Dynocol Group, we recognize our environmental responsibility as a core part of our operations across security, logistics, construction, and mission support services. The way we manage waste—whether generated at project sites, offices, or remote facilities—directly impacts the health of communities and the ecosystems we work in. We take this responsibility seriously and are dedicated to reducing our environmental footprint.

Our Waste Management Policy reflects our proactive approach to minimizing waste, promoting recycling and reuse, and ensuring safe disposal methods. I encourage every team member and partner to implement these standards diligently. Together, we can lead by example and contribute to a cleaner, healthier Somalia while advancing our operational goals.

Ali Ahmed Dhadhaow

Founder/Chairman

Dynocol Group

1. Policy Objective

This policy sets out Dynocol Group's commitment to managing waste in a sustainable, responsible, and compliant manner. It defines clear principles to reduce waste generation, enhance resource efficiency, and ensure environmentally sound waste treatment and disposal.

2. Scope

This policy applies to all Dynocol Group offices, project sites, and field operations. It covers all types of waste—solid, liquid, hazardous, recyclable, and organic—generated through construction, catering, logistics, maintenance, and administrative activities.

3. Waste Reduction and Segregation

Dynocol will prioritize waste reduction at the source through efficient procurement, reuse of materials, and digital transformation to reduce paper waste. All waste will be segregated at collection points into designated categories: organic, recyclable, hazardous, and general waste. Proper containers and signage will be used to support this process.

4. Safe Handling and Disposal

All waste will be stored, transported, and disposed of in compliance with local environmental regulations and international best practices. Hazardous waste will be managed with strict controls, including secure containment, PPE use, and disposal through certified third-party handlers.

5. Recycling and Reuse

Dynocol encourages the use of recycled materials and the reuse of packaging, containers, and equipment whenever feasible. We aim to divert waste from landfills by partnering with licensed recyclers and supporting local waste recovery initiatives.

6. Training and Awareness

Employees and subcontractors will receive regular training on waste management procedures and environmental impact awareness. Signage, toolbox talks, and operational briefings will reinforce best practices in the workplace.

7. Monitoring and Reporting

Site supervisors and environmental officers will maintain records of waste quantities, types, and disposal methods. Periodic audits will be conducted to ensure compliance and identify opportunities for improvement.

8. Continuous Improvement

Dynocol Group is committed to continuously improving our waste management systems. Feedback from staff, clients, and stakeholders will be used to revise practices and adopt new technologies or methods that enhance efficiency and environmental performance.

Conclusion

Dynocol Group views waste management not only as a regulatory requirement but as a vital element of our broader commitment to sustainability and social responsibility. Our goal is to lead by example, reduce waste at every level of our operations, and promote a culture where environmental stewardship is embedded in day-to-day activities.

We call on all employees, contractors, and partners to fully implement this policy, adhere to best practices, and contribute to a cleaner future for Somalia. By working together, we can turn waste into opportunity—protecting communities, conserving resources, and building trust with the clients and institutions we serve.
