CEO Statement

At Dynocol Group, we recognize that protecting the environment is fundamental to sustainable development and long-term business success. As we deliver critical services in security, logistics, infrastructure, and mission support, we also carry the responsibility of safeguarding the natural resources and communities around us. Environmental stewardship is not an option—it is a duty we embrace in every aspect of our work.

This Environmental Policy reflects our proactive commitment to reducing our carbon footprint, conserving energy and water, promoting biodiversity, and preventing pollution. I call upon every employee and partner to uphold these principles and contribute to a greener, more resilient Somalia. Our actions today will shape the environmental legacy we leave for future generations.

Ali Ahmed Dhadhaow

Founder/Chairman

Dynocol Group

A circular blue stamp with the Dynocol Group logo in the center. The text around the perimeter reads "DYNOCOL GROUP" at the top and "SOMALIA" at the bottom, with small asterisks on either side of "SOMALIA".

1. Policy Objective

This policy outlines Dynocol Group's commitment to environmental protection, sustainable resource use, pollution prevention, and compliance with applicable environmental legislation and international standards.

2. Scope

The policy applies to all activities, employees, subcontractors, and sites managed or operated by Dynocol Group across Somalia. It covers construction, logistics, life support, procurement, security, and facility management operations.

3. Environmental Principles

Dynocol Group is guided by the following principles:

- **Compliance** with all applicable environmental laws, permits, and client requirements.
- **Prevention** of pollution and proactive risk management to minimize environmental harm.
- **Sustainable Use** of energy, water, fuel, and raw materials.
- **Conservation** of natural habitats and biodiversity in areas where we operate.

4. Energy and Resource Efficiency

We strive to reduce energy consumption and resource use by investing in energy-efficient technologies, optimizing logistics routes, and promoting digital workflows over paper-based processes.

5. Waste and Emissions Management

Dynocol Group commits to reducing greenhouse gas emissions, managing solid and liquid waste responsibly, and avoiding practices that contribute to air, soil, or water pollution. All hazardous substances are handled with care and in accordance with regulatory protocols.

6. Procurement and Supply Chain

We favor suppliers and contractors who demonstrate environmentally responsible practices and aim to procure materials that are ethically sourced, durable, and low-impact.

7. Training and Employee Engagement

Employees are trained in environmental best practices relevant to their roles. Awareness campaigns, signage, and operational briefings will be conducted regularly to instill a culture of environmental responsibility.

8. Community and Stakeholder Engagement

We work collaboratively with communities, local authorities, and partners to promote sustainable development and environmental awareness. We also support local environmental initiatives where possible.

9. Monitoring, Evaluation, and Improvement

We measure our environmental performance through audits, reporting, and key performance indicators. Lessons learned from incidents, stakeholder feedback, and technological advances will be used to refine our practices.

Conclusion

Dynocol Group is committed to leading with environmental integrity in every project and service we deliver. By embedding sustainability into our operations, we not only reduce our environmental footprint but also improve efficiency, compliance, and stakeholder confidence.

Our future depends on the responsible use of resources and the protection of ecosystems. Every team member, from leadership to field staff, plays a role in this effort. By working collectively and consistently, we can ensure that Dynocol remains a force for progress—one that builds with purpose and preserves with pride.
